PERI YACHTS
CONTEMPORARY BENCHMARK

HIGH-TECH, HIGH-PERFORMANCE YACHTS

Peri is the new ambassador of contemporary spirit in the world of luxury yachting. Modern to the core, high performance, sleek aggressive lines and cool, minimalist elegance merged with advantages of e glass and epoxy construction putting Peri on the list of winners. Having won the prize of “best interior of yachts over 24 meters” with the Peri 29 and being nominated for the Neptune Award of best superyacht 35-40 meters with the Peri 37, this is only the beginning. Peri is eager to win many more awards with the latest construction, a Peri 41 Triple Deck, to be launched in 2010.

The boats are built at Peri’s high-tech shipyard in the Antalya free zone. Their naval architecture is by the UK’s renowned Bill Dixon and all composite technology and processes are by High Modulus.

FROM 29 METRES TO 41 METRES OF CONTEMPORARY LUXURY

29 METRES: SPACE IS THE GREATEST LUXURY OF ALL

The Peri 29 sets the style for the entire range: a swooping, aerodynamic profile that signals high performance, whether cutting through the waves or lazing in a fashionable marina. The long, rectangular portholes are particular to this model. They contribute an intriguing touch of secretiveness and intrigue.

The high-tech materials lighten the entire structure and open up new space for luxury living. The increased volume is apparent everywhere. The teak-laid decks are broad, with more room to entertain – or to sink into the huge sofas and sun beds that characterise Peri’s chic, relaxed style. Like all Peri yachts, the 29 features an unusually generous fly bridge.

Inside, the vast saloon establishes Peri’s minimalist style: bold graphic shapes, a palette of soft creams and greys, and luxurious textures – including lavish use of glossy, hand-stitched leather. Sophisticated lighting allows the quality of craftsmanship to shine through.

The owner’s cabin stands out with its full-beam width and glamorous en-suite wet room. However, the three guest cabins and the crews’ quarters are also more spacious than is standard for a yacht of this size. Regarding the galley, Peri is proud to say that it designs the 29’s galley for the needs of a much larger vessel.

Peri offer both 4- and 5-cabin versions of the Peri 29. The 5-cabin version caters to the needs of large families and their friends and can accommodate 10 passengers in the same spacious comfort.

32 METRES OF MASTERLY DESIGN

The Peri 32 is inspired by high-end car design. It combines lean, swooping profile and exhilarating performance with sophisticated high-tech features that enhance life aboard and distinguish it from any other yacht in its luxury class.

Compared with its close relation, the Peri 29, it has an additional half a deck to play with. Rather than add extra rooms, Peri decided to accentuate the sense of space by keeping the same number of rooms as in the 29 but making them even bigger. The pilothouse was moved to a new half-deck, and the master cabin transferred to the main deck, where it spreads out majestically.

True to Peri’s preference for uncluttered elegance, the 32’s exterior and interior are decorated predominantly in soft white, increasing the impression of endless space and supreme contemporary style.

34 METRES OF PURE INNOVATION

The Peri 34 is for the independent achiever who goes his own way and sets standards for others to follow. It is a splendid example of thinking outside the box.

Its owner will revel in the perfection of its epoxy laminate sandwich construction which was the springboard to a range of design and performance advantages, all based on its combination of lightness and strength. High speeds and a tough, osmosis-free hull, a huge relief to its owner, feature high on its list of credentials. So do fuel savings, thanks to the lighter displacement obtained by the epoxy sandwich construction.

But first and foremost, the Peri 34 commands attention by its modern, elegant lines, another tribute to superior engineering. Its streamlined profile will appeal to the most discerning eye. The unique transom design allows for better use of the boat's full length, increasing the sense of space.

37 METRES OF POWER AND SEDUCTION

The 37 reflects Peri's ultramodern style, where strong lines and aggressive allure hint at the vessel's exhilarating speed. Despite its aerodynamic profile, the 37 offers far more deck space and interior volume than most vessels of its size. Thanks to the 8.10 m beam and lighter, high-tech construction, the living surface is comparable with that of a yacht in the 40-metre range.

The fly bridge provides a natural setting for fashionably oversized sofas, sun-beds and Jacuzzi. The generous aft deck is fitted with a retractable, high-tech mesh screen that can be raised to shield this key area from observers when the yacht is moored. The decoration of the full-beam 42-square metre master stateroom positioned on the main deck is typical of the yacht's minimalist but pampering style. The master stateroom has its own adjoining study which also opens onto the vast saloon. The crew's quarters and the very chic galley have been designed and equipped to satisfy the needs of a much larger vessel.

THE 41-METRE TRIPLE-DECK: MASTER OF ALL YOU SURVEY

Peri dedicates the 41-metre tri-deck to the kind of person who is accustomed to living in great style. It is built to indulge to his every whim and is a true residence at sea.

Nevertheless, the space and freedom aboard may be the greatest attraction of all. The Peri 41 demonstrates that vast areas of space and privacy are one of life's most satisfying luxuries. Its beam-wide staterooms and master bathrooms are one of the outstanding benefits of its light but strong epoxy sandwich construction. Cumbersome walls are replaced by spectacular views, lavish quantities of light, and endless room in which to display exquisite furnishings.

Though its owner may never have sailed a high-tech composite yacht and enjoyed its remarkable performance, he will identify with the advantages immediately. These extend from the feeling of speed and superior handling to the tougher, more resistant hull which will protect the value of this supreme asset.

Resolutely modern and a challenge to its peers, the 41 tri-deck will remain a rare, connoisseur's privilege.

A SHIPYARD BUILT TO EXCEL

Peri builds its high-tech yachts in one of the most advanced yards in the eastern Mediterranean.

The site is Antalya, on the Turkish Riviera, where Peri Marine Craft Industry & Trade Inc. is equipped to build performance yachts of 96' (29m), 106' (32m), 112' (34m), 121' (37m) and 135' (41m).

Peri's business philosophy is to manufacture composite yachts under the right conditions and to the highest standards. The boats take shape in a dust-free, climate-controlled environment and are the product of leading-edge design and engineering technology. The company invests in the most advanced tools for composite production and quality control and is determined to become, and remain, a reference in the field.

In addition to the shore teams, a support team of professional mariners contribute their vast experience gained through thousands of miles at sea. This resourceful combination of skills ensures that Peri will meet the standards that it has set as its target. All Peri yachts are built to classification rules and thus qualify for the approval required for charter.
